Performance**

**Conventional Inventory & Stock Management or Web based Inventory & Stock Management:
Which way the wind is blowing!**

**A guide to dealing with Inventory & Stock Management in a better way with Signum Inventory &
Stock Management**

S-I&SMS Signum Inventory & Stock Management System is a computer-based system for tracking inventory levels, orders, sales and deliveries. It can also be used in the manufacturing industry to create a work order, bill of materials and other production-related documents. Companies use inventory management software to avoid product overstock and outages. It is a tool for organizing inventory data that before was generally stored in hard-copy form or in spreadsheets. It is often associated with and is similar to distribution software, as distributors that can compete with less cash tied up in inventories have a distinct advantage over their competitors.

Features: Inventory Management Software is a web based & window based application in which users can access anywhere anytime. ISMS allow you to store modify and retrieve information using the pull down menus for all the modules. The software includes many modules like:
